Intermountain bristlecone pine is the oldest living thing on earth for now. Climate change threatens its living conditions.

Fraser fir get aid from Christmas Tree farms like this one. However, the numbers in the wild remain low.

Ecosystems where the Fraser fir grows are declining due to limited trees growing in the wild.

Critically endangered, the Chinese Magnolia has less than 100 mature trees left on earth.

Currently extinct in the wild, the Franklin tree relies on breeding, growing, and research by arboreta and botanical gardens to prevent total extinction.

Properly removing bark does not harm the Pygeum tree, but tree safety is often ignored in areas where jobs are scarce.
Overexploitation is just one of the serious threats to the world’s trees.

Land-clearing for farmland has caused the number of monkey puzzle trees to dwindle.

Once thought extinct, the dawn redwood is critically endangered due to lack of locations to grow.

Until the 1940’s the dawn redwood was only known in fossil records.

The almond-size seed of the monkey puzzle tree provides food for the Pehuenche people of Chile.
